

WANTO Enhances Women's Health and Breast Milk Production in Lactating Mothers

New Delhi, 2 May, 2013: Breast milk is considered the optimal food source for newborns through 1 year of age. Although breastfeeding is recommended for infant's positive health outcomes, yet its widespread adoption as the primary mode of providing nutrition to infants remains challenging. The most common reason for early breastfeeding cessation is inadequate milk production.

Galactogogues (or lactogogues) are medications or other substances that promote initiation, maintenance, and/or augmentation of maternal milk production. Herbal galactogogues are commonly used and many of them have documented evidence of their ability to improve breast milk production

OZONE Pharmaceuticals Ltd. brings WANTO Capsules for general improvement of women's health and nursing mothers with inadequate milk supply.

As a lactagogue WANTO capsule improves the quality and quantity of nursing mother's milk. It is enriched with superior herbal extracts that work synergistically to rejuvenate the muscles & bones, aids digestion and minimizes acidity. *Ashwagandha* and *Shatavari* are major '**rasayana**' herbs (**Rasayana herbs** are *Ayurvedic* herbs of rejuvenation and longevity) that relax and calm the brain, increase vitality, energy, endurance and stamina in women. *Shatavari* and *Vidarikand* restore hormonal balance in women and enhance fertility as these herbs contain potent plant steroids. It has been shown that, with an estrogenic effect on the female mammary (milk) glands and reproductive system, *Shatavari* and *Vidarikand* boost postpartum health and enhance the production of breast milk in lactating mothers.
